EXAMINER'S AMENDMENT

- An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
- The application has been amended as follows:
- Claim 56, line 1, after, A computer program, please insert, "embodied in a Computer readable medium".
- Claim 57, line 1, after, A computer program, please insert, "embodied in a Computer readable medium".
- Claim 58, line 1, after, A computer program, please insert, "embodied in a Computer readable medium".

REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and apparatus for processing image signals representing an original image. Each independent claim identifies the uniquely distinct feature, "for suppressing a signal intensity of a high-frequency Luminance component at P-th level, where p is an integer equal to or greater than 1, when said intensity of said high-frequency Luminance component conforms to a specific condition, applying a Dyadic Wavelet inverse transform processing to transformed and processed signals and synthesizing processed Luminance signals and Chrominance signals with each other to generate processed image signals". The closest prior art, Thomas (USPN 6,801,672 B1), discloses wherein a color image is enhanced by removing noise, a wavelet transform is applied to a color image to generate sets of Wavelet transform coefficients for multiple channels, edge maps are produced for the channels from the sets of Wavelet transform coefficients, an edge

likelihood map is generated based on at least one edge map, the edge likelihood map is applied to the sets of Wavelet transform coefficients to generate sets of filtered Wavelet transform coefficients. A de-noised color image is reconstructed from the sets of filtered Wavelet transform coefficients; while Abdel-Malek et al. (USPN 5,619,998), disclose enhanced method for reducing ultrasound speckle noise using Wavelet transform, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
